

Website Development Project Minutes

Telecon was held on: May 03, 2012, 8:00 PDT, 17:00 CEST

Participants: Sean Kelly, Sean Hardman, Emily Law

Meeting Summary:

The latest IPDA demo site was updated by Sean Kelly incorporated input from last telecon. It's available at: <http://planetarydata.ath.cx:443/planetarydata>

The updates include:

- Removal of automated project phasing
- Removal of automated standards publication
- Import of existing users and content
- Repaired "blue" theme
- Wiki-style permissions on everything under "/projects" and "/documents/technical-experts-group"
- Admin-only permissions on "/standards", "/meetings", and "/documents" (save for the TEG)
- Resolution of 2/3 IBM Rational AppScan issues

Discussion focused on Documents and Meetings pages. Suggestion was to make all the pages default to table view. For each page, the table attributes can be difficult and tailored for specific page use. For example, Meeting page's table can include meeting title, location, date, agenda and documents. And listing meetings in reverse chronological order would be better.

For Documents, bin them into 5 categories: Steering Committee, Technical Experts Group, Presentation and Others. Under Steering Committee folder, can have Charter, Policies, Procedures folders.

Action items:

1. Kelly to incorporate inputs received.
2. Kelly to resolve JPL IT security issues and make the demo site available on the JPL server, ideally a couple days prior to next telecon on May 15th.
3. All to check out the site at <http://planetarydata.ath.cx:443/planetarydata> and provide feedback via: <https://oodt.jpl.nasa.gov/jira/browse/IPDA>
4. Next telecon to be held on May 15th 2012 @ 8:00 PDT, 17:00. Emily to send notice of meeting.
